

Arjith Arya Amutha Saravanakumar

Computer Engineering Undergraduate — The University of Hong Kong

Open to Summer 2026 Internships

Tokyo, Japan • arjitharya@gmail.com • [GitHub](#) • [LinkedIn](#) • [Portfolio/Website](#)

Undergraduate Computer Engineering student with hands-on experience across machine learning, digital logic, and full-stack development; focused on the software side of embodied AI. Working toward EVA, an AI/software layer for an assistive humanoid robot designed to support elderly people's daily needs.

◆ EXPERIENCE

Sysveda Information Technology Pvt Ltd, Tokyo

Jul 2025 - Aug 2025

AI Programmer Analyst Intern

- Trained a Random Forest regression model to 86.3% accuracy on a 10,000-row dataset, benchmarking it against linear/logistic regression, decision trees, and neural networks for pattern detection
- Co-built an agentic AI system on AWS Bedrock that automated report transcription across multiple internal R&D projects

Tsukuba Tech, Tsukuba

Mar 2026 - Present

Chief Technical Officer (CTO)

- Led and mentored a team of 8–10 interns split into frontend, documentation, and UI/UX sub-teams to design and build TanzzAI's product documentation and marketing site via Next.js
- Ran weekly progress reviews and regular stand-up calls across all three sub-teams, debugging blocking technical issues in real time
- Instituted daily written progress logs across the team to monitor individual output and catch issues early

◆ PROJECTS / HACKATHONS

HumorBot

Feb 2026 - Apr 2026

Live Demo Link: [arjitharya.github.io/HumorBot/](#)

- Conversational AI companion that mirrors a user's own sense of humor instead of answering questions
- Prototype for EVA's persona-conditioned dialogue

Q.U.I.L.L

Jun 2026 - Present

Live Demo Link: [arjitharya.github.io/QUILL/](#)

- Private journaling companion that listens and remembers without giving advice
- Prototype for emotionally-attuned conversation design EVA needs

NAND2Tetris — Virtual HACK Computer

Mar 2025 - Present

Self-paced Coursework: [github.com/arjitharya/NAND2TETRIS](#)

- Built a working virtual computer from NAND gates up through adders, registers, and multiplexers
- Hardware layer complete, Software layer in progress

SimpleSpeak AI

Jul 1 - 5, 2026

Ctrl + V Hackathon: [devpost.com/software/simplespeech-4sfqbt](#)

- Solo-built an accessibility tool that rewrites dense legal/medical/school text into six simplified formats via an LLM

SafeCity App

Jun 24 - 28, 2026

FutureHacks Hackathon: [devpost.com/software/safecity-43yrgt](#)

- Contributed frontend and API integrations on a 3-person team building a location-aware safety app with live emergency numbers, nearby help mapping, and an on-device AI assistant

EDUCATION

The University of Hong Kong

BEng Electrical/Electronics/Computer Engineering
Sep 2026 - Present

Focus: Robotics & Autonomous Systems
Minor: Informations & Systems Analytics

UIA International School of Tokyo

High School Diploma (A Level)

Apr 2015 – Jun 2026

- Future Leader Scholarship, 2 yrs
- High Honor Roll, 3 yrs (95%+)
- President, Coding & Robotics Club

SKILLS

Languages

Python

JavaScript

Java

Arduino

HTML / CSS

Focus Areas

Machine Learning

Robotics

Computer Architecture

Full-Stack

Tools

AWS / Azure

Git / GitHub

Docker

NumPy / Pandas

CERTIFICATIONS

- Python Programming for Beginners
Udemy, Aug 2026
- Java Tutorial for Complete Beginners
Udemy, Sep 2025
- Software Engineering Job Simulation
Forge — Quantum, Jul 2026
- Cyber Security Operations Job Simulation
Forge — Datacom, Jul 2026
- Robotics and Controls Job Simulation
Johnson and Johnson, Jul 2026
- Agents League: Reasoning Agents
Microsoft, Jul 2026
